IN THE CLAIMS:

Please amend claim 1 as follows:

- 1. (Currently Amended): A foamable poly(vinyl chloride) resin composition comprising 100 parts by weight of (A) a poly(vinyl chloride) resin, 0.5 to 30 parts by weight of (B) a processing aid, and 0.5 to 15 parts by weight of water and 0 to 20 parts by weight of a thermal decomposition foaming agent as a foaming agent (C), wherein the processing aid is obtained by adding and polymerizing 0 to 50 5 to 40 parts by weight of a monomer mixture (b) comprising 0 to 50 % by weight of methyl methacrylate, 50 to 100 % by weight of at least one monomer selected from the group consisting of methacrylate excluding methyl methacrylate and acrylate, and 0 to 20 % by weight of a vinyl monomer copolymerizable therewith, in the presence of a latex of a (co)polymer obtained by emulsion polymerizing 50 to 100 60 to 95 parts by weight of a monomer mixture (a) comprising 50 to 100 % by weight of methyl methacrylate, 0 to 50% by weight of a monomer selected from the group consisting of methacrylate excluding methyl methacrylate and acrylate, and 0 to 20 % by weight of a vinyl monomer copolymerizable therewith in an amount that a total amount of (a) and (b) is 100 parts by weight.
- 2. (Original) The foamable poly(vinyl chloride) resin composition of Claim 1, wherein the water is steam generated by heating 0.5 to 30 parts by weight of a substance.
- 3. (Original) The foamable poly(vinyl chloride) resin composition of Claim 1, wherein the processing aid (B) is a (meth)acrylate copolymer which is obtained by adding and

polymerizing 0 to 50 parts by weight of a monomer mixture (b) comprising 0 to 50 % by weight of methyl methacrylate, 50 to 100 % by weight of at least one monomer selected from the group consisting of methacrylate excluding methyl methacrylate and acrylate, and 0 to 20 % by weight of a vinyl monomer copolymerizable therewith and wherein specific viscosity at 30°C of the solution containing 0.1 g of the polymer mixture in 100 mL of chloroform is at least 0.5, in the presence of a latex of a (co)polymer which is obtained by emulsion polymerizing 50 to 100 parts by weight of a monomer mixture (a) comprising 50 to 100 % by weight of methyl methacrylate, 0 to 50 % by weight of a monomer selected from a group consisting of methacrylate excluding methyl methacrylate, and acrylate, and 0 to 20 % of a vinyl monomer copolymerizable therewith in an amount that a total amount of (a) and (b) is 100 parts by weight, and wherein specific viscosity at 30°C of the solution containing 0.1 g of the polymer mixture in 100 mL of chloroform is at least 0.7.
